

LING 471 A Computational Methods For Linguists Course type: Face-to-Face

Evaluation Delivery: Online Evaluation Form: A Responses: 8/31 (26% low)

Taught by: Yuan Chai Instructor Evaluated: Yuan Chai-Lect Inst

Overall Summative Rating represents the combined responses of students to the four global summative items and is presented to provide an overall index of the class's quality:

| Combined Median | Adjusted Combined Median | | | | | |
|-----------------------|--------------------------------|--|--|--|--|--|
| 4.1 | 4.0 | | | | | |
| (0=lowest; 5=highest) | | | | | | |

Challenge and Engagement Index (CEI) combines student responses to several *IASystem* items relating to how academically challenging students found the course to be and how engaged they were:

(1=lowest; 7=highest)

CEI: 4.8

SUMMATIVE ITEMS

| | N | Excellent (5) | Very Good (4) | Good (3) | Fair (2) | Poor (1) | Very Poor (0) | Median | Adjusted Median |
|--|---|------------------|---------------------|-------------|-------------|-------------|---------------------|--------|--------------------|
| The course as a whole was: | 8 | 38% | 50% | 12% | | | | 4.2 | 4.2 |
| The course content was: | 8 | 38% | | 62% | | | | 3.3 | 3.2 |
| The instructor's contribution to the course was: | 8 | 50% | 38% | 12% | | | | 4.5 | 4.4 |
| The instructor's effectiveness in teaching the subject matter was: | 8 | 38% | 12% | 50% | | | | 3.5 | 3.4 |

STUDENT ENGAGEMENT

| | | | | | | | | | Much Higher | | | Average | | | Much Lower | | |

LING 471 A Computational Methods For Linguists Course type: Face-to-Face

Taught by: Yuan Chai Instructor Evaluated: Yuan Chai-Lect Inst

STANDARD OPEN-ENDED QUESTIONS

Was this class intellectually stimulating? Did it stretch your thinking? Why or why not?

2. Yes definitely. A lot of problem-solving and critical thinking is involved.

3. This class was intellectually challenging because programming was completely new to me. Everything presented didn't really have an obvious solution to it despite everything that was taught in the lecture, which was a nice change of pace since it allowed me to think more.

4. This class was intellectually stimulating, since I was not familiar with a lot of the topics

5. I think yes because I've never been exposed to the things we learned about before, but I struggled a lot and felt like everyone else seemed to grasp onto concepts better and quicker than me which was discouraging.

What aspects of this class contributed most to your learning?

1. The class activities were really helpful for me to understand the concepts/codes introduced in class

2. learning how computer science relates to linguistics, and how they work together.

3. What helped me with learning the most was office hours since I could really grasp what I did wrong with the homework.

4. Very direct help from the instructor who was very responsive to feedback. I also thought the homework was reasonable.

5. The professor's willingness to help students and and give us chances to do better when we were struggling. Also the demonstrations of how to go about the more difficult assignments and extra office hours.

What aspects of this class detracted from your learning?

2. the lecture time is a little too long, not because of the content of the lecture, but I couldn't really concentrate that long even though there is a break in the middle.

3. I honestly didn't think that the reading dossiers were that helpful and kind of do wish its content were more important to the class.

5. I often felt really confused especially when it came to class activities because they moved quickly and I easily got left behind when struggling with simple things. I often felt impostor syndrome and I still feel like I didn't learn as much as I was supposed to in comparison to other classmates.

What suggestions do you have for improving the class?

2. Actually love this class, it is one of the classes where as long as you are willing to learn and ask for help, you will learn a lot. I don't have much complaint about it.

3. I don't have much in improving the class aside from maybe focus a little more on the linguistic side of things.

4. I would love to have gone deeper into the readings more often

5. Perhaps continuing to incorporate more demonstrations/help/explanations of assignments

IASystem Course Summary Reports summarize student ratings of a particular course or combination of courses. They provide a rich perspective on student views by reporting responses in three ways: as frequency distributions, average ratings, and either comparative or adjusted ratings. Remember in interpreting results that it is important to keep in mind the number of students who evaluated the course relative to the total course enrollment as shown on the upper right-hand corner of the report.

Frequency distributions. The percentage of students who selected each response choice is displayed for each item. Percentages are based on the number of students who answered the respective item rather than the number of students who evaluated the course because individual item response is optional.

Median ratings. *IASystem* reports average ratings in the form of item medians. Although means are a more familiar type of average than medians, they are less accurate in summarizing student ratings. This is because ratings distributions tend to be strongly skewed. That is, most of the ratings are at the high end of the scale and trail off to the low end.

The median indicates the point on the rating scale at which half of the students selected higher ratings, and half selected lower. Medians are computed to one decimal place by interpolation.¹ In general, higher medians reflect more favorable ratings. To interpret median ratings, compare the value of each median to the respective response scale: *Very Poor, Poor, Fair, Good, Very Good, Excellent (0-5); Never/None/Much Lower, About Half/Average, Always/Great/Much Higher (1-7); Slight, Moderate, Considerable, Extensive (1-4).*

Comparative ratings. *IASystem* provides a normative comparison for each item by reporting the decile rank of the item median. Decile ranks compare the median rating of a particular item to ratings of the same item over the previous two academic years in all classes at the institution and within the college, school, or division. Decile ranks are shown only for items with sufficient normative data.

Decile ranks range from 0 (lowest) to 9 (highest). For all items, higher medians yield higher decile ranks. The 0 decile rank indicates an item median in the lowest 10% of all scores. A decile rank of 1 indicates a median above the bottom 10% and below the top 80%. A decile rank of 9 indicates a median in the top 10% of all scores. Because average ratings tend to be high, a rating of "good" or "average" may have a low decile rank.

Adjusted ratings. Research has shown that student ratings may be somewhat influenced by factors such as class size, expected grade, and reason for enrollment. To correct for this, *IASystem* reports **adjusted medians** for summative items (items #1-4 and their combined global rating) based on regression analyses of ratings over the previous two academic years in all classes at the respective institution. If large classes at the institution tend to be rated lower than small classes, for example, the adjusted medians for large classes will be slightly higher than their unadjusted medians.

When adjusted ratings are displayed for summative items, **relative rank** is displayed for the more specific (formative) items. Rankings serve as a guide in directing instructional improvement efforts. The top ranked items (1, 2, 3, etc.) represent areas that are going well from a student perspective; whereas the bottom ranked items (18, 17, 16, etc.) represent areas in which the instructor may want to make changes. Relative ranks are computed by first standardizing each item (subtracting the overall institutional average from the item rating for the particular course, then dividing by the standard deviation of the ratings across all courses) and then ranking those standardized scores.

Challenge and Engagement Index (CEI). Several *IASystem* items ask students how academically challenging they found the course to be. *IASystem* calculates the average of these items and reports them as a single index. *The Challenge and Engagement Index (CEI)* correlates only modestly with the global rating (median of items 1-4).

Optional Items. Student responses to instructor-supplied items are summarized at the end of the evaluation report. Median responses should be interpreted in light of the specific item text and response scale used (response values 1-6 on paper evaluation forms).

¹ For the specific method, see, for example, Guilford, J.P. (1965). Fundamental statistics in psychology and education. New York: McGraw-Hill Book Company, pp. 49-53.
